PROJECTS

OTS Docs Editor [React | Redux | Node | Socket.IO**]**

Features

- In this application multiple users can update same document simultaneously.
- Connection between users is maintained using *"**Socket.IO**"* library.
- Session management and data caching on leaving/re-opening tab.

Phase II: Add data in selected documents automatically, by editing the current.

Stock Exchange Proto [React | Redux | Recharts | Material UI**]**

Features

- In this application users can view real time stock, crypto and money market graphs.
- Market analysis API for real-time data, used **"Recharts"** for presentation.
- UI structured as a broker web-app, Buy/Sell options added.

Phase II: Premium pages to show predictions on the basis of chart patterns/market flow.

Expense Tracker [React | Redux | GraphQL | Context API**]**

Features

- In this application users can track record of Income & Expense calculation.
- Add positive value for Income, Sell, Refund & negative for Loss, Expense, Buy, etc.

Daily Blog [React | Redux | Node | MongoDB**]**

Features

- In this module, users can add/edit/update their daily blogs/articles.
- This application is particularly for employees to contribute or share their ideas by writing few paragraphs, adding images/videos/gifs alongside.
- Receiving Feedback from readers/viewers, from same panel but different login.
